

FAQs

Q. How many treatments are required?

A. Each tattoo is unique and requires a different number of treatments, depending on the depth of ink penetration, the size, age and color of the tattoo itself. In order to see optimal tattoo removal results, you need around 4-8 treatments in 8 week intervals. This ensures that your body has time to absorb the tattoo's pigment residue and dispose of it safely.

Q. Can all tattoos be removed effectively?

A. Certain pigments and inks are harder to remove than others. Lighter colors are more difficult to remove because they do not absorb the laser light as easily as darker tones. That being said, most tattoos are treatable, with the exception of white ink. During the pre-treatment consultation, you will be advised regarding your specific tattoo.

Q. Are there any side effects to the treatment?

A. SharpLight's pulsed laser light technology is gentle and safe on the skin. Patients most commonly experience some redness, swelling, and minor blistering after a treatment. Detailed aftercare instructions are always discussed with the client on how to properly care for their skin after treatment.

Why you should choose tattoo removal treatment with SharpLight?

- ▶ *Non-invasive, safe with no down time*
- ▶ *Effective, dramatic disappearance*
- ▶ *All shapes, sizes and colors of tattoos are treatable*
- ▶ *Effective on all skin types*

What our Practitioners are Saying:

Dr. C. Hagbi, AML, Israel

“ I highly recommend the QS for tattoo removal. I have been using the system for several months now and have been impressed by the power, precision and ease of use of the device. I have been able to treat both old and new tattoos and the results are excellent.

Introducing the cure to your 'tattoo regret'

Tattoos always seem like such a good idea when you decide to get them, but sometimes their allure decreases with time. If you have a tattoo that you would like to be a part of your past, the tattoo removal treatment can provide you with a fast, effective and completely surgery-free solution. You are not alone, tattoo regret is incredibly common. As laser technology is improving, so is the demand for tattoo removal. In 2016 the number of treatments in the United States alone rose by 13%, and laser tattoo removal was listed as the third nonsurgical procedure that saw the most significant increase.

Tattoo Removal
without causing permanent skin
damage

How does it work?

SharpLight's Tattoo Removal treatment uses Q-Switched laser technology that targets the ink of the tattoo and applies localized pulses of light aimed to decompose the tattoo's pigment clusters. This pulsed light safely passes through the skin's outer layer and is absorbed by the ink. The light creates an acoustic effect, which breaks the ink down into smaller particles, making the tattoo fade and eventually disappear.

Seeing is Believing

What
our
Patients
are
Saying:

SharpLight's Tattoo Removal treatment worked wonders. Not only is my tattoo fading after just 2 treatments, but I am able to get them done during my errands with zero downtime!

Kimberly Wall -
SharpLight Patient

I recently got my ex's name permanently removed from my chest and now I finally feel like I am free! Just a few treatments were needed, but now I won't be reminded of my past every time I look in the mirror
