

FAQs

Q. How many treatments are required?

A. Although results are apparent after the very first treatment, a minimum of 3 treatment sessions are recommended in order to reach visibly clear results. Treatments can take around 20-40 minutes depending on the area size being treated.

Q. Are the treatments safe?

A. SharpLight's laser treatments are non-invasive and **100% safe**. Depending on the patients needs and wants, the laser energy can be set to different strengths to affect varying depths, allowing practitioners to provide patient-tailored treatment plans.

Q. What are the advantages of SharpLight's treatment?

A. The advantage of the Fractional technology is that it delivers impressive scar reducing results. The Fractional laser is significantly gentler than standard lasers with zero to minimal downtime. The best part of the procedure is the ongoing tightening patients experience during the healing process.

Why should you choose scar reduction treatment with SharpLight?

- Clinically proven to remove scars safely and effectively
- Non-invasive and fast treatment
- Visible results from the 1st treatment
- Effective on all skin types

What our Practitioners are Saying:

Dr. David Levens
M.D., Plastic Surgeon

Having the capability to modify fluencies, spot size, pulse duration and beam delivery, optimizes treatment parameters to meet each patient's specific clinical needs. Using the Erbium: YAG hand piece for skin resurfacing treatments offers our patients results that are immediately visible yet comfortable.

the beauty of your success

Scar Reduction

Leave your scars behind

Scar reduction using Fractional Laser technology

Today, more than ever before, you can eliminate or significantly reduce the appearance of scars. SharpLight's Fractional Laser technology structurally changes the skin's scar tissue and restores its natural appearance. Treatment is non-invasive, fast and effective and will give you the smooth complexion you desire.

Say Goodbye to Scars and Hello to Smooth Skin

Scars originate from different reasons such as cuts, sores, burns, acne and even chicken pox. Their severity also depends on several factors such as age, ethnicity and the location of the scar.

Thanks to technological advancements in aesthetic treatments, it has never been easier to get rid of unwanted scars. The treatment is very safe and highly effective and in only a few treatment sessions your scars can be part of your past.

How does it work?

SharpLight's treatment uses an advanced Er:YAG 2940 Fractional Laser. The treatment is unique since unlike traditional lasers that ablate large areas of the skin, the Fractional Laser ablates only a 'fraction' of the skin. It does this by ablating micro-columns in the skin. The columns are separated by healthy tissue which quicken the recovery period.

The depth of the micro-columns can be adjusted to reach the source of the scarring. Following the ablation, the body replaces scarred skin with structurally correct healthy tissue, and the scar is significantly less noticeable.

What our Patients are Saying:

“ I had a Cesarean section and the scar was quite large. I had 3 SharpLight treatments and the results are amazing! The scar significantly faded and my skin looks much more natural. ”
Silvi Marina
SharpLight Patient

“ I had a Keloid scar that ran all along the left side of my jaw. It was a source of great anguish for me. I was very skeptical but decided to treat it. After only 2 SharpLight treatments the scar changed its color from dark pink to my natural skin tone and dramatically reduced. Today there is only a hint of it and it is barely visible. ”
Gabi Garsia
SharpLight Patient

Seeing is Believing

Having clear skin was important to **81%** of respondents to live a more confident life

61% of women would wear less makeup if they were able to minimize the appearance of their scar tissue
